Acknowledgments

I want to thank to Frans Cornelissen for the opportunity to benefit from his valuable supervision, invaluable input to my research skills and his guidance throughout my time in his lab.

I am grateful to Anneke Hooymans for providing support to my research with dedication even after her retirement and for her efforts to keep this thesis on track.

I would like to express my special thanks to Deniz Baskent for her guidance and valuable advices not only scientifically but also personally. I will always appreciate her kind assistance.

My sincere thanks to Serge Dumoulin and Moniek Lorist for taking time to read this thesis and for their commitment to participate in the reading committee.

My two paranympths Elvan and Violeta, you were not only two little fairies during this period but also great friends ever since we met.

The ever-growing vision-lab's cats, Barbara, Nicolas, Doety, Mirjan, Alessandro, Joana, Hinke and Sandra: with your colorful personalities, you have been instrumental in one way or another in my pursue of my PhD.

Koen, Ronald, Jan Bernard and Aditya, your support during the initial times that we were settling in the lab meant a lot, thanks for your generosity in sharing the knowledge. I would also like to thank Ben and Remco for their guidance during the fMRI analyses. Branislava, your cheerful company in the NiC was always a lifting factor during my time in there. Hedwig, Diana and Evelyn, thanks for being very helpful and cooperative to assist my problems throughout my PhD.

I must say that writing this thesis was more of an emotional challenge than a technical one. My greatest thanks to Murat, it would not be possible without your endless support.

Thanks to the GUTSA gang for being my family far from home. We shared countless memorable moments together: Turhan (a.k.a. my behind the scenes paranympth), Faruk, Aysegul, Seyda, Gokhan, Elvan, Yagiz, Behzat, Ismail, Erdal and Osman Abi.

For making my time exponentially more joyful, big thanks to Ilche, Ghazaleh, Constanza, Lais, Ena, Claudia and Marija.

I can never underestimate the contribution of my teachers who assisted me to succeed my way to a cognitive neuroscience related career, while coming from a different background. Didem Gokcay, Huseyin Boyaci, Cem Bozsahin, Annette Hohenberger, Varol Akman, Mustafa Nakeeb and Mark Ashton Smith, your help and your trust in me will always encourage me for the rest of my academic journey.

Last but not least, I would like to thank to my family for always standing next to me and allowing me to roam around the world as a free soul.
